

# DRAGON

BOOKS BY MELBOURNE HOUSE

This complete collection of books explains everything you need to know to get the most out of your Dragon 32. The most exciting games, the latest programming techniques and the most practical step-by-step instructions — everything necessary to make your Dragon roar.

## Enter The Dragon

Thirty exciting programs that will turn your Dragon 32 into a complete arcade of action-packed games including Lunar Lander, Dragon Invaders and Meteor Storm. Includes many professional tips and hints. "Ambitious and intended to improve your grasp of computing in general and the Dragon 32 in particular."

— Personal Computing News

## Dragon 32 Programmer's Reference Guide

The complete Dragon reference. From simple BASIC to advanced machine language routines including sound and

graphics. Each facility of the Dragon is fully explained with the aid of demonstration programs. A must for any owner who wants maximum performance from their Dragon 32.

## Dragon Machine Language For The Absolute Beginner

Follow the logical steps and practical examples to complete mastery of Dragon machine language. Written in easy-to-follow, 'no jargon' style. Now you can write faster, more exciting programs. Takes you right from the beginning to full understanding in easy steps, each fully explained and illustrated with clear examples.

### How to submit articles

Articles which are submitted for publication should not be more than 3,000 words long. The articles, and any accompanying programs, should be original. It is breaking the law of copyright to copy programs out of other magazines and submit them here — so please do not be tempted.

All submissions should be typed and a double space should be left between each line. Please leave wide margins.

Programs should, whenever possible, be computer printed.

We cannot guarantee to return every submitted article or program, so please keep a copy. If you want to have your own program returned you must include a stamped, addressed envelope.

### Accuracy

*Popular Computing Weekly* cannot accept any responsibility for any errors in programs we publish, although we will always try our best to make sure programs work.

## Editorial

Sinclair's flat-screen tv may, or may not, do for television what the transistor radio did for wireless. It will certainly do a lot for Sir Clive's reputation as Britain's 'golden boy' of electronics.

The flat-screen tv is not a new idea — scientists have long been speculating about tv screens just a 1/2in thick which could be hung on walls. Pocket-sized flat-screen tvs have also been mooted for some time. But, until this year, no one had really been able to produce a commercially viable flat-screen tv for general consumption.

Sony pipped Sinclair to the post with its Watchman flat-screen tv, due in part to industrial trouble at Timex's plant in Dundee. But the Watchman, brainchild of Sony designer Yasuo Kuroki, is bulkier and more expensive than Sinclair's offering. Even the improved Watchman II will cost about \$200 in the US, compared to Sinclair's £79.95 in the UK.

Sinclair's flat-screen tv may not be the first, but it is the cheapest. It is also one of the most technically advanced, being able to receive signals in both the UK, US and Europe.

Once the problems of producing a colour flat-screen tv are solved, Britain's micro users will be able to dream of a new generation of computers that will be truly portable.

## Next Thursday

Centipede, next week's star game for the 48K Spectrum, is a version of the arcade game and the object is to shoot all the bugs which attack you. By Jim Provan.

.....placed at your fingertips by the ingenuity of Abrasco's wizardry. As the Fly Snatcher you have to catch flies to live on, while being hunted by an agile and determined weasel that leads to a rapid game of survival. Double Trouble creates a nerve racking world where your wits are mercilessly pitted against VIC, with only speed and accuracy to save you from Schizophrenic Spike and the ever increasing obstacles to your survival. Pursue the alien, kill his drones, avoid rogue asteroids, you're running out of fuel, the relentless pace is quickening even more-what chance is there of survival in Alien Hunter. Only skill comes between your threatened city and its total annihilation by persistent androids and their battlecruiser with its awesome warhead in Android Attack. Meter Mania provides entertaining hectic harassment while you try to beat the clock and four meter maids, with amazing hi-res graphic tricks in this machine code game. A ravenous shark awaits with eagerness and determination the descending parachutists, while only you and your boat are able to thwart his menu in Catcha Troopa. Vixplode & Vixplode-64 is the latest cult game where the computer pushes your brain into new realms of cunning and mind bending strategy as you attempt to gain control of the board.

Take it easy with this marvellous electronic brain and its extensive foolproof programs as it copes with the numerous problems of a Home Manager. Abrasco's miraculous Electronic Spreadsheet Abracalc provides instantaneous solutions to a multitude of complex problems, yet is simple to use and exceedingly good value. High seas adventure as Captain of a galleon scouring the seas for roaming pirates while avoiding falling off the edge of the world in this hi-res graphic game Pirate. Superb graphics compliment your skill and judgement as you prepare to pot the last ball to capture the championship in a blaze of glory, with Pool. Realistic simulation in Golf tests your golfing skills to the limits as you encounter bunkers, rough, trees and wind in an effort to win the round.

# ABRASCO

## A TOUCH OF MAGIC

## Oric v Peanut

Continued from page 1

"I personally find it hard to believe that they would exclude themselves from all the PC's software.

"But, whatever. You can be sure that there will be artificial barriers in Peanut to make it non-upgradable to the PC," he added.

Barry Muncaster

The Peanut, Sinclair's new 'professional' computer and now Oric's planned computer are all aimed at an as-yet untested market — straddling the gap between home and business systems. Some industry observers believe that this new market will prove to be by far the biggest of the lot.

● Oric's disc system for the Oric I computer has been delayed. The company plans to build 1,500 units in December. Said Barry Muncaster: "Realistically there won't be many in the UK before Christmas. We now have it all working — it just depends on the quantities of drives which Hitachi can supply.

"The numbers we have been promised from January look very promising ramping up from 2,500 to 4,000 in three months."

## Enterprising Elan

Continued from page 1

× 28. Up to four pairs (foreground and background) or colours chosen from the 256-colour pallet can be used in text modes.

Graphics modes go up to the highest resolution of 672 × 256 pixels with a limit of two colours on each horizontal line. The number of colours which can be used in one line from the 256 possible squares every time the number of pixels in a line is halved. For example up to 16-colours can be used in one line for a 168 × 256 display.

Commands exist in the Basic — Elan's own — for

## Flat-screen unmasked by Sir Clive

SIR Clive Sinclair unveiled his flat-screen tv in London last week. Slightly larger than a cigarette packet, the black and white tv is the result of a six-year development programme which cost £4m.

The tv set runs off a lithium based flat battery developed by Polaroid, though it can also be run off the mains with the aid of an adaptor. Key to the new tv is a flat-screen cathode ray tube and a single integrated circuit, which allows the tv to work in the US and Europe as well as in the UK.

Priced at £79.95, including VAT, Sinclair's flat-screen tv is considerably cheaper than Sony's Watchman tv launched earlier this year.

Sinclair regards his flat-

screen tv as "a major breakthrough" and said, "I believe it, and its successors, can achieve for television what the transistor radio did for wireless."

Sir Clive is currently working on a colour flat-screen tv, but is unwilling to commit himself to any completion dates.

## ZX81 and Spectrum taken to task

MULTI-TASKING on the ZX81 and Spectrum is now possible, thanks to a Poole-based outfit called David Husband.

The company is now offering a Forth multi-tasking Rom replacement for the ZX81 for £28.75. A Spectrum plug-in cartridge module is also on the way, in a couple of weeks for £63.56.

taking blocks of memory and loading them directly on to the screen.

The machine has a cartridge port capable of taking a 64K Rom pack, twin cassette ports, twin joystick ports, Centronic and RS423 interfaces, tv, monitor, cassette and head-phone connections are also provided.

An expansion bus gives access to additional memory packs and twin 3½ inch micro-floppy disc drives or other peripherals. The Enterprise is CP/M compatible. Memory organisation on the Elan is in 16K pages. Additional memory can be stacked up in 64K units.

The Basic is organised such that extensions to the software to control peripherals are automatically hooked into the standard Basic when the additional module is connected. A 'base unit' — providing additional power — is howev-

"I'm hoping it will shake people up a bit," says company founder David Husband. "In the computer market the hardware has jumped forward while the software has stayed still.

"I see the Forth Rom as something fundamentally new — a very low cost multi-tasking system with a Z80 and 16K."

The 2K ZX81 Rom features a built-in editor with user-defined split screens and the multi-tasking which can schedule up to 10 tasks at pre-determined times. Machine-

er necessary to connect the first unit. The first of these peripheral units is scheduled for June 1984, two months after launch. Software for the Elan machines is being written by Intelligent Software and a number of other software houses have expressed interest in producing material. Lisp and Forth will both be available as alternative languages.

Elan Computers is a new company (see *Popular Computing Weekly*, August 17), formed by software house Intelligent Software and Hong Kong electronics manufacturers Domicrest. The Elan computers will be 75 percent manufactured and assembled at two factories in the UK.

The idea for Elan apparently came from an unnamed international finance consortium which then approached Intelligent and Domicrest to carry out the project.

Microcomputer owners will be disappointed to learn that it is not really feasible to link a micro with the new tv. The 2in screen is simply too small for program lines to be legible.

Initially, Sinclair's flat-screen tv will be available by mail order only. Application forms are available on request from Sinclair Research Ltd, TV Division, Stanhope Road, Camberley, Surrey (Tel: 0276 62111).

● Meanwhile, Japanese electronics giant, Matsushita has announced the development of a portable colour television set.

The device, about the size of a handbag, uses back projection on to a pop-up translucent screen 16cm across.

code definitions are automatically threaded into the Forth.

The Spectrum cartridge version is more ambitious — a 12K fig-Forth with multi-tasking and built-in RS232 and Centronics interfaces.

The ZX81 Rom replacement can be undertaken by the user but it involves removing the existing Basic Rom which is soldered in. ZX81s complete with the Forth Rom in place and 16K Ram pack can be bought from Densham Computers, 329 Ashley Road, Parkstone, Poole.

Details of either the ZX81 or Spectrum multi-tasking systems from David Husband, 2 Gorleston Road, Branksome, Poole.

## Barbican goes personal

THIS year's 6th *Personal Computer World Show* kicks off next week at the Barbican Centre, London.

The Show is open to the public from Thursday, September 29 to Sunday, October 2. Times are 10 am to 7 pm every day except Sunday, which is 10 am to 5 pm. Entry is £3.

# At last... A joystick that works!

Cambridge Computing bring you the first **programmable** joystick~ at a price you can afford.

The  
**Intelligent**  
Joystick

**£29<sup>90</sup>**  
JOYSTICK, INTERFACE  
AND TAPE COMPLETE

## Interface

- 1k on board memory
- Own rear edge connector – for printers etc.,
- Compatible with all standard joysticks

## Joystick

- Self centring
- 8 Directional microswitched action
- 2 independent fire buttons

## Tape

- Easy to use program enables the interface to work on ALL software
- Keeps a record of all your games – so you only need to tell it about each game once!

**CAMBRIDGE  
COMPUTING**

1 Benson Street, Cambridge CB4 3QJ

Interface and Tape at £24.00

Joystick only at £7.00

For Spectrum

I enclose cheque / postal order\* for £.....  
made payable to Cambridge Computing Limited.

\* delete as necessary.

## Martian error

Before we lay the Martians to rest (my letter, PCW, 25-31 August) would you please point out to readers that the Martian word for 'yes' is *gw!* not *gw!*. Otherwise my remarks do not make sense.

A W Rowe  
69 Huddley Lane  
Huddersfield HO4 6PR

Apologies, I am afraid that our knowledge of Martian is such that the spelling error slipped through unnoticed.

## Speedy reviews

Having just been introduced to your excellent weekly computer newspaper, I would like to comment on the impressive speed of your reviews. How do you do it? The reviews are always interesting, quoting your Microdrive review as an example.

I always turn firstly to your reviews and then your informative letters page. I have just read Philip Crawley of Buckwell, Salop's letter and I would like to inform him of my high score for *Orbiter*, 651,910. The completion of this took just over two hours — beat that.

Paul Holden  
110 Crescent Road  
Great Lever  
Bolton BL3 2JR

## Play fair, Dragon

The long wait for the arrival of Dragon Data's discs is over. However, the speed in which the Premier Delta system came onto the market must have taken a large share of the dedicated Dragon user's, who now might want to run Dragon based disc software on their already bought high Cannon drive.

It seems that, at first glance, Dragon Data has built a type of non-compatibility into its system — the one half height drive (with a location for the second) is a standard drive and can be run with the Delta controller, but only allows you 110 bytes, not the 185 allowed by the Dragon controller. What Dragon Data has in fact done is to put a small saw cut

into the disc side of the controller's connection board, which allows a small piece of plastic located in the connector of the controller/drive lead to mate up with, allowing only a Dragon lead to be used with a Dragon controller. This in fact can be removed and will fit onto the Delta controller.

Dragon has also moulded its controller cover so that you cannot get the Delta lead on the Dragon controller without having an extension board or cable made up. Another point is that Dragon Data appears to have no intention of selling the controller separately.

Come on, Dragon, play fair — sell the controller separately and save the dedicated user from unnecessary expense.

Hywel Francis and  
Dave Barrell  
TWM Software

Cyncoed  
Cardiff

## Random statement

If any Dragon owners are upset with the apparent lack of a *Randomize* statement, or its equivalent, so that "random" numbers are always generated from the same starting point, resulting in the same game of *Mastermind* or whatever on power-up, try the following:

```
10 Input "Random number seed"; A
20 A = RND (-A)
```

Any numbers subsequently generated may be considered random and the same sequence can be generated by using the same "seed" value for A.

For an unrepeatable sequence, try:

```
10 A = RND (-Timer)
```

I hope this will be of benefit to any frustrated Dragon owners.

David Harcourt  
34 Old Ballymony Road  
Ballymena  
Co Antrim  
N. Ireland

## Debugging exercise

The program from T Choy, *The Root of the Problem* (PCW, 8-14 September) was excellent stuff — can I put in a

plea for even more actually intelligent material, such as this and the recent astronomical programs, in future issues — preferably at the expense of the ceaseless round of Zap-the-Alien drivel (may I also, en passant, add my vote to the requests for a Spectrum machine code series).

However, Mr Choy's program, as printed, contains a few bugs which prevent it, for example, from solving:

$$x^2 - 16 = 0!$$

Also, while it will tackle:  $x^2 - 3x^2 + 3x^2 - 3x + 2 = 0$  (1) successfully, the related equation

$$x^4 + 3x^2 + 3x^2 + 3x + 2 = 0$$
 (2)

whose roots are simply minus the roots of (1), has it completely flummoxed. Debugs follow:

(a) Omit line 538 entirely. Its only purpose is to prevent you demeaning the dignity of your machine by giving it trivial cubics to solve. The snag is that the cubic routine, as well as solving cubics in its own right, also gets called by the quartic routine; and a perfectly genuine request to solve a non-trivial quartic, can snarl up on the program's sense of

## Plot to print solutions

With regard to the query in PCW 25-31 August, in your Peek and Poke feature, relating to conversion of Plot to Print, I offer the following solutions. I'm not certain what your correspondent had in mind, but I hope these are of some help.

In the case of *Plot to Print*, care should be taken that there is room on the screen for what it is desired to do. In the case

of *Print to Plot*, the *Print* statement should be followed by "!".

With regard to the *Screen\$* query, this in fact returns a character, and not a numeric value as stated.

620 LET X2 = -(B + SGN R) \* (ABS R) / 2A:LET X3 = -X2:GO TO 730

(c) Line 1018 is a classic *If...Then* snarl up. Amend to read:

```
1018 IF M < 1 THEN LET M = 1
1019 IF M > 2 THEN LET M = 2:
REM Whoops!
```

(d) (The big one) Line 850 includes *Let V = Sqr P2*. The snag is that the machine will always take the positive square root, while sometimes the negative root is required (this is why equation (2) fouls up). To debug, change line 857 to:

```
857 DIM A(2,2): IF 2 * U + V < > RD
- RM * Y1 THEN LET V =
-V
```

All in all, an excellent debugging exercise: I thoroughly enjoyed myself. However, something in my water tells me that was not what you had in mind when you published it.

Jim Hind

# Connect Four

A new game for the Commodore 64 by Les Allan

**C**onnect Four for the Commodore 64 utilises hi-resolution graphics to produce an on screen version of the popular board game of the same name. In order to make use of the full screen, each disc is made up of 4x3 characters and the graphics for the row numbers are arranged to be in the centre of each disc. Simon's Basic commands have been used throughout, but the program can be easily rearranged to run on the basic machine.

During play, the selected row for each disc is made by pressing keys 1 to 7. Pressing F1 resets a game, whereas F7 recalls the instruction page prior to the start of each new game.

Variables used are as follows:

T ..... time delay  
X ..... disc position (vertical)

Y ..... disc position (horizontal)  
CS ..... screen position at top of selected row  
DL ..... instruction delay  
C\$ ..... title C  
E\$ ..... title E  
F\$ ..... title F  
N\$ ..... title N  
O\$ ..... title O  
R\$ ..... title R  
T\$ ..... title T  
U\$ ..... title U  
TIS ..... timer

Rem statements and procedures within the program listing should provide a clear understanding of how the program works, but just in case here is a brief functional listing:

#### Notes

16 clear screen: colour black  
18 highlight Simon's Basic: list every 22 lines  
20 set timer to zero: instruction variable to 10

30-44 title characters  
46-50 disc character and colour  
60-88 print title page for first 30 secs.  
90-124 print instructions for first 60 secs.  
126 exec hi-res characters  
130-140 set up game  
150 keyboard entry  
152 re-set game by pressing F1  
154 re-calls instructions prior to new game  
156 checks for valid keyboard entry  
158-170 sets value of row and screen for key pressed  
172 checks for free space at top row  
182-196 drop disc to one space above last position  
202-208 delay procedure used during title  
214-670 relocates screen memory and character set and generates user defined graphics  
676-698 plays music at game start  
704-720 plays extract at lower volume during play ■

Discs may be connected together either horizontally, vertically or obliquely to place 4 in a row.

Use keys 1-7 to select your row

[F1] .....resets a game  
[F7]....recalls instructions

# Logan's run . . .

David Kelly talks to Ian Logan, author and machine code expert

Despite an enviable reputation as an authority on Z80 machine-code, Ian Logan still regards himself as an amateur enthusiast.

A graduate in medicine from Sheffield, he qualified as a GP. But, his first attempt to get involved with computers was a failure — he was turned down for a job as a doctor for ICL. "They gave me a nice lunch, but I didn't get the job."

After that, he spent nine years working as a GP — still with a faint hope of somehow, someday, becoming involved in computers.

In 1980, he joined the Lincolnshire Microprocessor Society. Through the group he met people who had Pets and Tandys. "I borrowed a Pet for a fortnight — and it sat on the table downstairs. I didn't really know what to do with it."

Then he bought a ZX80. "Bob Maunders of Linsac put an advertisement in one of the magazines, saying he wanted ZX80 programs," says Ian. "I phoned him up and discovered I knew more about the machine than he did."

The two decided to produce a book for the machine — which became Ian's first book. A small spiral-bound handbook called *The ZX80 Companion*. Ian wrote about one third of it — the rest was written by Bob and another writer, Terry Trotter. It came out in September 1980.

All of Ian's knowledge of the ZX80 is self-taught. Back in 1980 there were no introductory tutorial books on machine code programming, such as there are now.

"At that time, I always used to think that somebody, somewhere, knew all there was to know about machine code programming. Now I have found out there never were any — there still are no experts."

Bob Maunders was unable to publish Ian's next book, on ZX80 machine code, and suggested he try to find another publisher. "There I was, a week after the ZX81 was launched, going round this micro show trying to get someone to publish a manuscript written for the ZX80."

"After a couple of people turned me down, I answered an advertisement from Melbourne House.

"I got a phone call from Australia when I was over at the village hall mowing the lawn and my wife came running across to tell me. The call was from Fred Milgrom and that is how I started writing for Melbourne House."

Fred Milgrom asked Ian to convert his book for the ZX81. "Melbourne House apparently made a lot of money out of some sensational book published in Australia about female sex hormones. But Fred has a great interest in computers — and in particular he loves adventure games."

"And he has some very good program-

mers out there with him now — like Philip Mitchell who wrote *The Hobbit*."

Ian's first book for Melbourne House was published in September 1981 — almost exactly a year after his first.

Next came a chance meeting with Frank O'Hara — a government statistician. "Frank thinks and lives numbers," says Ian. "And he understands all the mathematics which I don't." Together they wrote *Understanding Your ZX81 Rom*. "I started ZX81 disassembly from the front, and he started from the back. We met in the middle."

Then the Spectrum came out — Ian and Frank have recently written *The Complete Spectrum Rom Disassembly* for it. "The book is doing very well — because nobody else has attempted anything like it."

For the last couple of months Ian has been preparing yet another book. *The Spectrum Microdrive Book*. This book is a departure for Ian — for the first time he is writing about his own work.

From Christmas until Easter, Ian worked two days a week for Sinclair, writing software for the Interface 1, which is necessary to connect the Microdrive to the Spectrum.

Ian's book on the Microdrive and Interface 1 will be published in either late September or early October.

Since working on, and writing a book about, the Microdrive, Ian has become something of an authority on the device. "People don't seem to be as excited about the networking possibilities as I thought they would be — there is no reason why you cannot join up Spectrum Nel with other computers. Networking is great fun."

"The other thing people don't seem to have realised is that you can pass anything on the RS232 and store it on Microdrive — if you are prepared to use the

Spectrum as a controller. You could easily save software from a BBC onto Microdrive.

"It remains to be seen if anyone will build Microdrive controllers for other machines to use them direct. Although not difficult technically, it might be difficult to manufacture it at a low enough price — the Microdrive has a big ULA in it, doing a lot of work."

One of the most interesting things Ian has discovered is the existence of a set of software "hooks" to enable users to access routines in the Interface Rom. This means that anyone can now add new commands to the Spectrum. "You can add what you like — add new languages if you want." These can only be written in Ram but, if stored on Microdrive, they could be loaded in each time before using the machine.

When Ian was working at Sinclair, he met Scott McCourt. Scott was in charge of writing the system software for the Timex 2000 machine. The US Spectrum equivalent. He asked Ian to help — go over to the US and write software for them.

"They wanted to add new commands to the Spectrum," says Ian. "The machine was a 1981 design and requirements for a 1983 computer have evolved since then. They were going to have to redo the Spectrum printed-circuit board for the TS2000 to satisfy the US FCC regulations, and to make it compatible with the NTSC tv standard. So, while they were about it, they decided to produce an enhanced version, with extra commands."

"I'm not sure if Timex made the right decision — maybe they should have just put out the Spectrum, more or less as it is and got it out over there earlier."

During his two weeks stay with Timex, Ian showed them how to add new commands and routines. He extended the syntax checking and corrected some of the small bugs in the Spectrum's own Rom. "I wouldn't want to make too much of the Spectrum's faults. It is a very successful machine," he says. "After all, it is not often you need to use the number — Int65536."

After the Microdrive book comes probably the TS2000 version of Ian's best-selling *Complete Spectrum Rom Disassembly*, again with Frank O'Hara. "I don't know what I will do next — at the moment I'm sort of drifting from one thing to another. I had a Vic20 all last winter — the plan was to write a book for it — but I got so frustrated at the way the machine software was organised.

"Perhaps I ought to sit down and write some programs — but I don't like writing games very much. I am going to have to learn a bit about 16-bit machine language. That's going to be all the rage next year."

"What I have found is that I like problem solving. I enjoyed my work with Sinclair and Timex — and I'd like to do more. I'd like to continue to be involved with the computer industry and I don't feel as though I am at present. People like me don't get employed by a company if they can do it themselves."

# Hitchcockian nightmare

John Scriven picks his way through another selection of Spectrum software

In the months since the Spectrum first nosed its way on to the market, there has been a drastic improvement in the available software.

The first games were mainly coloured copies of ZX81 favourites, with a lot of slow Basic programs thrown in for good measure. When programmers had got the hang of smooth movement in machine code, the standard began to improve. Even without the definition of the BBC and the sprite facilities of the Commodore 64, there is probably now a larger selection of good Spectrum software on the market than for any other machine.

Having spent several months with other machines, it was a pleasant surprise to be presented with a pile of games software for the Spectrum that was generally of a good standard. Although the old favourites were there and some novel but ultimately boring games, there was some of the best TV entertainment since Anne Diamond first graced my early morning screen.

*Invaders* from Artic includes the copy-right notice and instructions on the loading screen, a good idea that many companies seem to employ nowadays. There are options at the start to choose game difficulty (1-9), the number of players (1-2) and game variation (1-4). This latter choice can provide you with mutant invaders and bombs from different angles. Should you be one of the seven people left in this country without your own copy of this game, then you will find this version reasonable enough, and with plenty of varieties to keep you amused for some time.

*Gobble-a-Ghost* from CDS Micro Systems and *Muncher* from Silversoft are both Pacmen in slightly different guises. *Gobble-a-Ghost* with four ghosts and four power pills provides instructions in the packaging but nothing on screen to help you. The controls used are *I* and *Q* for up and down, and *9* and *O* for left and right, a comfortable combination and slightly preferable to *Muncher's* use of *N* for down and *K* for up. At least manufacturers seem in the main to have stopped using the cursor control keys, apparently logical, but in fact the worst choice.

*Gobble-a-Ghost* is reasonably difficult in the first frame, but there are no little extras that we have come to know and love, such as charms, strawberries and names for the ghosts. *Muncher* has all these and a beautiful demonstration game at the start. Unfortunately, although the program loaded with no difficulty, the game itself refused to start, so I can't say how good it was in action.

*Jawz* from Elin Software started off with some promise. The title page is good, and you can select the number of players and

the difficulty level. The game is set off the coast, with a view from the seabed to the surface. You are provided with a base that can be moved left and right across the sand, firing at sharks that swim between you and the surface. Hanging just below the water-line are jelly-fish that drop poison pellets on to you.

The idea itself is novel and could have resulted in an interesting game. However, the sharks only swim left and right and you can even control how close to the surface they swim. Once you've destroyed one layer, another appears. Perhaps I missed some hidden subtilty, but the game rapidly became boring and yawningly predictable. If you suffer from insomnia this could be the ideal program for you.

*Firebirds* from Softek produces waves of flapping cosmic vultures that either crash into your base or drop unpleasant things (?) on your head. If you kill enough of them, white motor-cycle helmets progress down the screen and generally get in the way. Apparently, a mother-ship makes an appearance at some stage if you can put up with this Hitchcockian nightmare.

The screen has a wrap-around feature which is irritating; although the vultures zoom off to the left and reappear on the right, you cannot do the same. There are pretty little multi-coloured displays between individual games and this package is probably worth considering if you like alternative versions of space-zapping. If you prefer the real thing, try riding round Trafalgar Square on the back of a moped for half an hour.

*Embassy Assault* from Sinclair/ICL is another game that starts off with much promise. "You are one of the country's best agents and have been given the task of acquiring some top secret codes from the stronghold of a foreign embassy."

3D views inside the building are displayed, although not in great detail, and the game is rather slow, particularly in generating the maze of rooms (20 seconds for level one and three minutes for level nine). There are maps positioned on some of the walls, and stairs lead you to three other storeys.

When you reach the code room, there is an envelope on the wall. You don't have to

pick it up, open it, decode it, or in fact, do anything — you simply retrace your footsteps and leave the building. There are no guards to stop you and the only thing you play against is the clock, so there is little challenge in this game.

Yet another program that appears to offer a great deal at the start is *Schizoids* from Imagine. The cassette blurb invites you to be a space dustman and to help shove all the galaxy's garbage into the nearest black hole with your Space-dozer. The main disappointment is in the display, which is black and white. Not an easy game to master, it is reminiscent of *Asteroids* in the type of controls you have for you craft; eg. rotate left and right, thrust, etc.

Usually, you end up being spat out by some strange-shaped piece of rubbish, or else fall into the black hole yourself. One wonders which unfortunate part of the galaxy is at the receiving end for all this junk (come to think of it, I seem to have seen something like this in PCW's offices — perhaps that's why they've changed their address recently).

*Sentinel* from Abacus is original and entertaining if you like space arcade games. A cross-shaped mother ship appears in the centre of the screen containing four rockets that you can launch and use to protect the main base. You can fire missiles and proton cannons as you steer the mini-rockets round the screen. There is even a force field that will temporarily repel invading aliens. Fast-moving and using clear, high-resolution graphics for the space-craft, this game proved to be above the usual standard of space games.

Another game that shows evidence of

careful thought is *Spectra Smash* from Romik Software. Although it is only a version of *City Bomber*, it can be played with a variety of joysticks. There are nine different levels, not to mention anti-aircraft fire.

The buildings that have to be bombed away before you can land are much too pretty — they look like a typical street in Amsterdam, complete with gable ends. If

you succeed in clearing the screen, you can make your touchdown in what must be the Dam square. A fuel truck comes to your assistance and lets you take off to attack yet another area of Amsterdam (I know the Dutch are generous, but this is ridiculous).

Although illogical in concept and dubious in morality, it's fun to play. Also included is a copy of *Breakout*, which is just as boring as it was when it first appeared in pubs six or seven years ago — but one shouldn't complain about a freebie game, even if you'll rarely want to play it, unless you're feeling nostalgic.

Having looked at a rather weak game from Imagine, it was a pleasure to find one of theirs that has appeared on the market more recently called *Jumping Jack*. This is great fun, original in concept and very addictive.

On the surface a simple game, at higher levels it requires great concentration and the ability to keep a straight face while being pursued across the screen by a dinosaur, a jumbo-jet and a person with a shot-gun. There are eight moving lines on

the screen, each one containing gaps that move in both directions. You start at the bottom of the screen with eight lives and have to jump through the gaps to the next level.

Although the holes are essential for moving up the screen, they also drop you back should you be running in the wrong direction. If you fail to the bottom you lose a life. Each time you reach the top, a fresh screen appears, identical except for the addition of a hazard (jumbo-jets, etc). Each screen cleared results in an extra hazard to avoid, so the 20th screen has 19 of these things rushing about. To make it more interesting, in between screens two lines of a verse appear.

I greatly enjoyed this game and would recommend it wholeheartedly to anyone who can face frustration and horror as poor *Jumping Jack* misses the gap and crashes his head against the ceiling. I suppose this is only to be expected — after all, *Jumping Jack* and *Yossa Hughes* both originate from Liverpool.

I have left until last what must be the most intricately conceived piece of software for the Spectrum since the first

*Horace* game appeared on the market. *Manic Miner* from Bug-Byte has an amusing setting — Miner Willy has found a hidden mine in south London and has to bring out all the treasure that he discovers there. Willy can walk to the left and right and also jump. This last movement is most essential, for the system is full of unpleasant creatures just out to get him.

The first cave is the central cavern, and jumping from level to level up the display (while negotiating one-way conveyor belts and disintegrating floors) enables him to collect several keys positioned in awkward places. Should you manage to guide him to success before his air supply runs out, he has to make his way to the bottom of the screen again and exit through a flashing door.

If the game had been limited to this, it would have provided a few hours fun and would have been as good value as several other cassettes reviewed here. However, on passing through the door, poor Willy enters another cave — the Cold Room, with different levels and angry penguins guarding it. Leaping over them is the only way to achieve success. This cave is by no means the last however — and there is a total of 20 different screens, each one with different creatures and different techniques to solve before they can be mastered.

The names chosen for the caves are very tongue-in-cheek and will be instantly recognised by arcade freaks — *Attack of the Mutant Telephones* and *Wacky Amoebatrans* being two examples. My favourite cave is called *Eugene's Lair*, clearly aimed at a certain well-known programmer. This cave is full of malevolent WC's, complete with flapping seals.

In addition to the excellent game format, there is on-screen scoring, a musical opening title with moving piano keys and a demonstration of all the caves in the system. Accompanying music can be turned off at any time.

This game is so original, amusing and habit-forming, it will probably be voted No 1 Spectrum game this year. I ever meet Matthew Smith, the author of this game I shall complain most bitterly about the program being released during the summer. Were it not for this game, I would certainly be more sun-tanned than I am at present!

# Single ship combat

**Peter Bartley presents Alien Destroyer in the final part of his gameswriting series**

**T** round off the series, here is a games program utilising many of the ideas we have been considering over the past few weeks.

The object of the game is to destroy as many of the alien fleet as possible in single ship combat. You have a limited fuel supply and need one unit of energy to get back to your home base. However, your laser is solar-powered and hence uses none of the ship's energy (ie: you have unlimited firing). A five second warning sounds before you have ■ retire from the game.

Your ship's sensors can give you certain information: a tone sounds and the sights align when the enemy ship is within firing range. When the ship can be hit, the vulnerable portion is illuminated in green. The ship turns red when in line of fire, but cannot be hit. When you are close enough to the enemy ship, your navigation system will take over the aiming for you and "lock-on".

The controls of your ship are difficult to master. They are: P=up, L=left, colon=right, full stop=dawn, K=fire, @=track (tracking mode: the ship will always be moving in the last direction indicated, unless in tracking mode, when the ship will remain relatively stable). The difficulty lies in the fact that the motion of your craft is relative. For example, if you

made the ship veer left, the enemy would appear to move right, and so on. It's easier to just think of hitting the key which corresponds to the relative position of the enemy on the screen.

The first program is a "loader" — it simply defines the characters we'll be using in the game. Run the "loader" first, then *New* it and *Load* the second program (though not before *Saving* them both first, of course). Line 10 reduces the amount of memory Basic thinks it has, and line 20 reads the character data.

The second program is the game itself. Lines 10-110 are the initialisation. The reversed H in line 10 is a special print character: for those who missed the section in the fourth article of the series, here's how to obtain it. When typing the line for the first time, leave a space where the H should be. Return the line, and move the cursor up and onto the space you left. Type "[RVS ON]" and then hit H. A reversed H should have appeared. This character prevents lower case letters from being printed by accident. Line 20 defines the direction array for the enemy ship. Line 110 colours the lines of fire and starts the timer. Lines 120-310 are the main loop.

Many of the lines in this program can be considered as working in pairs. Lines 130 and 300 sound the alarm when the fuel is used up, lines 170 and 200 move the ship and lines 205 and 290 move the direction arrow. There are three subroutines (although two only are true subroutines). They are lines 400+ (final routine and

highscore), 500+ (firing routine) and 600+ (the "lock-on").

Other lines of importance: 210 checks whether there is a target in the sights. Lines 540-590 create the explosions. I always prefer it when print statements are explained so: line 140 has three spaces and three [CSR BACK]s in it. Line 640 is:

```
"[10 CSR RT][3 CSR DN][SHIFT @][SPACE]
[SHIFT L][CSR DN][3 CSR LFT][3 SPACES][CSR
DN][3 CSR LFT][SHIFT F][SPACE][SHIFT O]"
```

Line 670 is:

```
"[10 CSR RT][3 CSR DN][SPACE][SHIFT -]
[SPACE][CSR DN][3 CSR LFT][SHIFT ***][CSR
DN][3 CSR BK][SPACE][SHIFT -][SPACE]"
```

Note that both lines have [RVS ON] commands contained in them. This ■ true of all the *Print* statements in the program, except those contained in any of the lines 400-470 (remember the third article; we haven't read their character data into Ram, only our data from the loader program).

Main variables: A gives the position of the ship, F the position of the guidance arrow and B is the "general-purpose" variable.

This program shows how simple ideas can produce a very playable game — try to add "little extras" to it and then get to work on your own "pet" ideas.

If you do have a playable game, or simply an interesting routine, please don't hesitate to send it to *Popular Computing Weekly*, following the instructions given at the beginning of each Open Forum. Think of all those other Vic users out there, starved of programs. And if that doesn't warm your heart, there's always the chance to make a bit of ready cash from your effort. You have nothing to lose but your postage. ■

# The rings of Saturn

Maurice Gavin presents the rings of Saturn for 16K Spectrum

Through the telescope, Saturn is the beautiful ringed planet that never fails to impress — be it beginner or expert alike. This program does the next best thing and probably represents the most accurate computer simulation of Saturn ever attempted on a home micro. It is possibly superior to many mainframe efforts, with the known exception of NASA's Planetary Laboratories!

It features a full screen solid image, with all hidden lines deleted and the globe and ring system drawn accurately to scale. The user may tilt the planet and ring system at any angle up to 90°. If 0° is *input*, the planet is drawn as viewed directly over its equator with the rings shown edge-on. If 90° is *input*, a polar view is presented with the ring system completely encircling the planet. You may select a northern or southern aspect for the tilt. An *input* of *s* will show the underside of the rings and the equator and visible pole correct for this aspect.

The sequence of drawing the planet is as follows:

- 1) Check image size; rescale if bit >43
- 2) Draw globe correcting apparent oblateness for tilt
- 3) Draw equator correcting apparent oblateness for tilt
- 4) Draw semi-transparent ring system
- 5) "Trace" nearest edge of rings across globe according to N-S aspect
- 6) Draw Cassini Division through ring system: clockwise for N aspect

- 7) Delete Cassini Division if "behind" planet
- 8) Plot visible pole position correcting apparent oblateness for tilt

The program contains an option to *Copy* the completed picture to the ZX printer or to *Save* the image onto tape with the *Screen* command. The latter is simplicity itself — it is only necessary to press "p" (for picture) and start the recorder to *Save* the picture you have created. The angle of tilt is automatically *Saved* in the file name; eg. "sat-23.4". To recreate the picture, enter *Load "sat-23.4"Screen* and the Spectrum will search and display the appropriate image off of tape.

Unlike some uninformed computer presentations of this planet, the globe is not circular (except for the polar view) and so the *Circle* command cannot be used to draw the planet. This oval (or correctly termed oblate spheroid) shape is due to Saturn's rapid axial rotation in 10h 14m (Saturn's day), causing the equatorial "bulge" and polar "flattening". The Spectrum *Draws* the globe and ring system via the *Plot* command, using a rapid ellipse routine. In the case of the globe, the reduction in oblateness, as it is called, from 100 percent to zero (full circle) is applied progressively through the change of tilt from 0° to 90°. Similarly, the position of the equator and visible pole are correctly located according to the tilt of the planet

and the oblateness as presented.

As seen from Earth, the appearance of the planet is limited to a maximum tilt of 26.73° (ie, Saturn's axial tilt to the orbit about the Sun) in both north or south directions, plus or minus 0.49° depending on the relative positions of Earth and Saturn in their orbits at the time. Thus, any tilt in excess of 28° will represent a viewpoint other than from Earth!

The *Rem* statements show the general structure of the program. In the case of *Drawing* the globe and rings, it is only necessary to calculate the outline of one quadrant of the ellipse and to mirror this in the remaining three quadrants by *Drawing* each quadrant sequentially. Such a routine ensures the *Drawing* is executed rapidly, with the minimum of calculation to slow the program down. In the case of the routine to *Draw* the Cassini Division in the ring system, I have chosen to *Plot* one complete ellipse and you will note how relatively slow, though satisfying, this proves to be.

Because the whole of the above programs relies on the ability to *Draw* ellipses rapidly I have included as an addendum routine the short program called *Solid Ellipse*. It can easily be incorporated into your program if you wish to *Draw* these precise shapes. The variable *y* is used here to control both the vertical *y* coordinate *Plot* position and the maximum radius of the ellipse (called the semi-major axis). The routine is short enough to "tinker with" and find out precisely how it works, perhaps with your own value in place of *y* in lines 110 and 120.

# Circular logic

Michael Batty shows how to draw circles and ellipses in the first of a three-part series on computer graphics

Let's begin with some ideas about how to draw regular shapes such as circles and ellipses which comprise the basic elements of computer art. The usual way to draw a circle is to calculate points around its circumference and draw between them. The X, Y co-ordinates of each point are given by the formulas

$$X = R * \text{COS}(\text{TH}) \text{ and } Y = R * \text{SIN}(\text{TH})$$

where R is the radius and TH the angle from the horizontal measured counter-clockwise. If we vary TH regularly from 0 to 360 degrees (or  $2 * \pi$  radians), we trace out the points which lie on the circumference.

A circle is really a special form of ellipse where the vertical and horizontal axes are the same length. If we change these lengths by replacing R in the above formulas by XX, the 'radius' of the X axis and YY, the 'radius' of the Y axis, we generate points defining an ellipse. Program 1 en-

ables you to do this.

Try values for XX and YY between 100 and 300 to start with. If you wish to leave each image on the screen, delete line 180.

Program 1 is really too slow for computer art where speed is of the essence. This is because the sine and cosine functions have to be evaluated for each set of X, Y co-ordinates. It is possible, however, to compute these functions only once for a small fixed angle (DT) and to then use a recursive formula based on trigonometric addition rules to generate the sequence of X, Y values. This technique is used in Program 2. Run it and see that the same shapes are drawn over three times as fast as in Program 1.

We now need to paint or fill these shapes and we can make use of the triangle fill command `PLOT85` in BBC Basic. If you insert line 120 `MOVE 0,0` and replace line 150 with `PLOT85,X,Y` in Pro-

gram 1 and 2, these programs become the conventional ellipse filling algorithms used in most simple graphics.

However, these are also too slow and a faster technique is to fill the shape in the same way you might shade it manually, using vertical up and down strokes. In Program 3, this technique is used. Note that the fill is from right to left, as though you were left handed, because of the way circular angles are measured.

Also, observe that only the points defining the top half of the shape are computed. Faster fill routines exist even in Basic, but this technique is necessary for later work.

We now have quite a fast method for filling an ellipse and we can already generate some interesting computer art. Program 4 paints random sized ellipses in random colours at random positions on the screen, and the illustration shows what can be achieved. To get some weird and wonderful effects, alter the operation of the `GOL` statement in line 90 and use `MODE2` to generate 16 colours.

Next week, we will show how these shapes can be rotated to generate more formal designs. ■

# The best books for the Dragon 32

The Working Dragon 32

## The Working Dragon 32

A library of practical sub-routines and programs. ISBN: 0 946408 11 4

- "There clearly is a need for books of this kind which provide more than just games" — *Practical Computing*, Sept 1983.
- It's a good one! — *Personal Computer News*, May 20 1983

The Dragon Trainer

## The Dragon Trainer

Written as a combined manual and beginners course on the power of Dragon Basic. It is aimed at the beginner and assumes no previous experience in computing. ISBN: 0 946408 06 6

## Dragon 32 Games Master

Learn how to write your own top level games. ISBN: 0 946408 12 1

- "If you can't write a half way decent game after this then it will be down to your own lack of imagination. I would recommend the Brains book as the best of this selection." *Which Micro* — Sept 83

## Advanced Sounds & Graphics for the Dragon Computer

All the major aspects of the sound and graphics capabilities of this machine are covered in extensive detail. ISBN: 0 946408 06 6

Plus

## Sunshine Software

### Cruising

Quick thinking and dexterity are required to master this high speed chase game.

Look out for the Sunshine range in W.H. Smith's, Boots, John Menzies, other leading retail chains and through our national network of bookshops and specialist stores.

# A bit-mapped screen

*The first in a two-part series on hi-res graphics*

Though the possibilities provided by user-defined characters and sprites are almost limitless, the 64 does provide yet another major graphics mode, bit-mapped graphics. What this means is that rather than being able to address a minimum of one of the 1,000 character squares on the normal screen, the user is able to set any individual pixel (short for picture element) or dot on the screen. In this mode line drawings and curves can be drawn on the screen, though to make the fullest use of it you will need to get hold of the graphics extension cartridge for the 64, which will provide you with a variety of flexible graphics commands.

To understand the program given here it is necessary to know a little about the way the bit-mapped screen is set up. The screen itself contains 320\*200 separate positions, a total of 64,000. In order to store each of these separately, 8,000 bytes of memory are needed, providing 64,000 individual bits. Each of the standard character positions requires eight bytes (the 8\*8 grid that we used for user-defined graphics). Starting from the top left-hand corner of the screen, the first 8 (0-7) bytes of the screen memory are used to create what would be on the normal screen the first character position. The second eight bytes form the second 8\*8 grid and so on along the line. Since there are 40 character positions in a line, each line takes 320 bytes. In actual fact, because the bit-mapped mode enables individual pixels to be addressed, this line of 8\*8 grids is capable of holding eight single pixel thickness lines (though if you draw them all it would look like a solid bar).

The 8K of memory necessary to hold the bit-mapped screen is obviously not storable in the normal 1K screen memory nor, in fact, can it even use that area as a part of its area, since 1024 to 2023 is used to store colour information for the bit-mapped screen. The solution adopted in the program that follows is to locate the screen beginning at 8192, leaving 6K of memory for the Basic program, with the option of relocating Basic if the program is developed and lengthened. Using the program given here you will be able to use the bit-mapped screen as a sketch-pad, using either the cursor move arrows or a simple line-drawing algorithm to create a design on the screen.

**Hi-Res: Table of Variables**

DX	Distance between ends of line along X axis
DY	Distance between ends of line along Y axis
FNPE	The value that must be POKEd into PP to erase pixel X,Y
FNPP	The location of the byte in which pixel X,Y falls
FNPV	The value that must be POKEd into PP to set pixel X,Y
MO	The current mode of the program
SC	Start of screen.
SL	The slope of the line to be drawn.
X1,X2	X co-ordinates of ends of line to be drawn.
Y1,Y2	Y co-ordinates of ends of line to be drawn.

**Module 3.4.1**

This module configures the screen memory for the bit-mapped mode, defines some useful functions and clears the high resolution screen.

**Commentary**

Line 10025: The POKEs in this REM statement are not necessary for the running of this program. They are included in order that if you wish to expand the program in such a way that it may overrun

the screen at 8192 and onwards, you will have the necessary information to relocate Basic. As with the Sprites program, the POKEs should be included in a loader program which is run BEFORE the main program. The program as given here works happily within the 6K of memory up to 8192 — there is no necessity even to set a limit to the top of Basic.

Lines 10027-10029: The use of these functions is given in the table of variables. Line 10030: 53272 is the register normally used to control where the VIC II looks for character data, in this case it will dictate the beginning of the bit-mapped screen. POKing 8 in here sets the screen start to 8192. POKing 53265 with 32 sets the bit-mapped mode.

Lines 10035-10040: In Line 10022, the user was given the option of clearing the screen. During the development of the program, when the program is stopped and RUN-RESTORE pressed, alterations can be made to the program without affecting the contents of the screen at all. On running the program again it saves time not to have to clear the 8000 bytes. Line 10050: This line clears the normal screen memory area, which is now employed to hold the colour data for each of the 1000 normal character positions.

**Testing Module 3.4.1**

On first running the program, the screen should immediately fill with garbage. Gradually this will clear, leaving a screen which may still be covered with coloured squares corresponding to the position of characters on the normal mode screen. These too should then begin to clear and the screen be set to white. When the module is finished, press RUN and RESTORE to return to normal mode.

Continued next week

## SOFTWARE FOR THE DRAGON all machine code

### MAURICE MINOR — NEW

Get for a quick drive in your Morris Minor when you inadvertently wander on to a race track and find yourself in the middle of a Grand Prix. To turn back against the other cars would be suicide. The only thing to do is grin your teeth, grip the wheel, put your foot down and make for the finishing line and safety. If you can avoid the crash barriers and oil slicks, drive fast enough to avoid being run over by Mario and Nelson behind you, then you can think about overtaking the cars in front. Can you make it before your car falls to pieces? Another superb Arcade style game with animated high resolution colour graphics and sound. Requires one joystick.  
A very fast action with accelerator, damage report timer, six levels of skill and hall of fame.  
SUPPLIED ON CASSETTE £9.95

### EDITOR ASSEMBLER - DISASSEMBLER - MONITOR

Two pass global type. Supports labels of six characters. Directives: ORG, RMB, FDB, FDC, REM, Hexadecimal Arithmetic. Powerful debug. Monitor includes 14 commands plus set break points, selection of useful sub-routines and Disassemble.  
All together a powerful program package with information for the serious user or interested beginner. Supplied on cassette.  
PREVIOUSLY SOLD SEPARATELY FOR OVER £40. Now substantial sales let us bring the price down to only £19.95

Cheques/POs payable to  
**J. MORRISON (MICROS) LTD.**  
(Dept PCWE)

2 Glensdale Street, Leeds LS9 9JJ

ALL ORDERS DESPATCHED BY

RETURN FIRST CLASS POST.

Orders and Trade enquiries welcome.

Tel: (0532) 480987

AVAILABLE FROM SPECTRUM AND OTHER GOOD SOFTWARE DEALERS

# J. MORRISON (MICROS)

### CRUADER NEW

A superb arcade-style game with animated high resolution colour graphics and sound. In quest of the Holy Grail you, our intrepid hero, have to overcome seven, increasingly difficult stages to reach your goal: scale the city walls to reach the inner sanctum, leaping across pits, crossing enchanted lakes while avoiding deadly scorpions and devilish devils. None of our testers has yet managed to get past Screen 5. Will YOU be the one to reveal the secret of the final screen?  
SUPPLIED ON CASSETTE £9.95

### DRONDS — (OPTIONAL JOYSTICK)

Stop the Droids removing lead shields to release the bombs, which will destroy the world. Very fast game. Excellent Hi-Res colour graphics and sound.  
SUPPLIED ON CASSETTE £9.95

### CHES

Hi Res display of board and pieces. 8 selectable levels of skill. CURSOR control move selection (no numbers letters to enter). Supports CASTLING and EN PASSANT.  
SUPPLIED ON CASSETTE £7.95

### VULTURES — (uses one joystick)

FAST MOVING GALAXIAN TYPE GAME in Hi-Res colour with Hi-Res graphics and sound. A flock of vultures guard their eggs. As they swoop towards you try to kill them, but watch out! Just when you think you have killed them all, the eggs hatch.  
SUPPLIED ON CASSETTE £9.95

### BOBRA

ADDICTIVE Arcade style game in full colour. Drink the ladders and dig holes to trap the 'Mearnes' before they see you. 4 selectable speeds and choice of 1 to 9 Mearnes to start. NO JOYSTICKS NEEDED.  
SUPPLIED ON CASSETTE £7.95

## A QUALITY LIGHT PEN

### SUPERIOR PERFORMANCE

- ★ Absolutely insensitive to ambient lighting.
- ★ Responds to different colours and screen intensities without any adjustment of TV or monitor.
- ★ Red LED readout showing that data is available.

- ★ Switch for program control (allows pen to approach the screen without erroneous data capture)

★ All features are program accessible

### SUPERIOR PROGRAMS

- ★ Good Documentation
- ★ Tape storage of your work
- ★ User routines provided on tape and printout
- ★ 'Freehand' drawing program
- ★ 'Library menu' drawing program (define your own library of shapes)
- ★ Example programs illustrating uses of the pen and its features

### £25

inclusive of P&P.

Please state Dragon, BBC or Vic20 when ordering. Send cheque or PO to: Dept ICW, Datapen Microtechnology Ltd., Kingsclere Road, Overton, Hants.

Please enclose SAE if requesting technical literature. We welcome enquiries from dealers willing to demonstrate our product.

**Datapen Microtechnology Limited**

## INTRODUCING

If you've ever been killed by the evil goblin, flamed by a dragon, or turned to stone by a wizard, then *Micro Adventurer* is the magazine for you. Each issue is packed with stimulating features, such as advice on how to write your own adventures, reviews of the latest games, help for those in need and adventures in type in and play.

And if you want to make the most of your Commodore computer, you need *Commodore Horizons*. Each issue features competitions with £200 in prizes, pages of program listings, in-depth hardware evaluations and reviews of the latest software.

*Micro Adventurer* will be launched in October, followed by *Commodore Horizons* in November. And you can get your first copy free by subscribing now. For only £10, 13 issues of either magazine will be mailed to you direct — the normal rate is £10 for a year's subscription (12 issues).

## Commodore HORIZONS

Fill in this form and send it to **Micro Adventurer**, Subscription Department, 12/13 Little Newport Street, London WC2R 3LD — along with a cheque or postal order made payable to **Micro Adventurer**. The special UK subscription rate is £10 for 13 issues, overseas it is £16.

# Functioning well . . .

David Prins presents a numerical analysis technique for approximating functions

This program uses a numerical analysis technique, known as the Newton polynomial interpolation method, in order to approximate a function by a polynomial.

In general, if data is known about a function at  $N$  different points, then a unique polynomial exists of degree  $(N - 1)$ , which models the function exactly at the  $N$  given points and approximately at other points. This approximation is very good for functions which are 'well behaved' (ie. continuous, polynomial-like) and works best in the neighbourhood of the given data. But, if data is only known at, for instance,  $x = 1, 2, \dots, 10$ , you should not rely too much on the polynomial approximation at say  $x = 1000$ , which is nowhere near the given points.

The data points you enter will probably have been obtained from a science experiment of simulation, but the program can also be used to answer school maths questions regarding straight lines and quadratic curves which pass through given points.

It is important to note that approximations given by the program are only useful for "well behaved" polynomial or polynomial-like functions and for approximations in the region where the original data was given. Also, you must not enter any point more than once in any one set of data.

### Program notes

40-210 Set up required arrays and input the known data

220-340 Make any corrections required  
500-610 Calculate the polynomial coefficients, checking that all points entered are different  
620 Call the evaluation subroutine  
630-650 See if another evaluation is required — if yes, then Goto 620, else Stop  
700-790 The Evaluation subroutine — this asks for input of the evaluation point and prints the result  
1000-1010 Simple subroutine to get "Y" or "N" from the keyboard

### Variables

N Number of data points given  
X(N), F(N), C(N) Arrays to hold data points, function values at data points and polynomial coefficients respectively  
I, J Used as loop counters and array subscripts  
AS Holds result of INKEY\$  
X, F Hold correction data — X is later re-used as the value at which approximation occurs  
LD Used in polynomial coefficient calculation  
V The value which is the result of the program

# OPEN FORUM

**Open Forum is for you to publish your programs and ideas. Take care that the listings you send in are all bug-free. Your documentation should start with a general description of the program and what it does and then give some detail of how the program is constructed. We will pay the Program of the Week double our new fee of £6 for each program published.**

## Target Practise

### on Dragon

This is a simple target shooting game in which a cowboy has to fire at a moving target. The target randomly moves from top to bottom and vice-versa. Both the cowboy and the target are stored in arrays

'A' and 'B' respectively, since using the command 'Poke 65495,0' to speed up the game disables the cassette interface. Unless you escape from the program in the method allowed within the program itself you will have to press the reset button before using the interface to either save or load programs directly after playing.

There are 20 targets to hit and you are marked according to how many you manage to hit. The up/down arrows move the cowboy up and down. The 'shift' keys are used to fire. It does not matter if you let the target pass, as it will reappear again with no penalty. If your Dragon will not accept the Pokes leave it out.

### Variables

S Speed of the target  
F Determines direction of target travel  
H Number of target  
K Score out of 20  
X,Y Co-ordinates of cowboy  
O,G Co-ordinates of Bullet  
P,T Co-ordinates of target  
ARRAY A Cowboy  
ARRAY B Target

## Maze

on Vic20

The program prints a random maze and the player takes the form  a diamond at the top of the screen. The object is to reach the ball at the bottom of the screen without colliding with a wall in the least number of moves.

On most mazes that the computer forms

it is impossible to reach the ball without pressing the 8 key; when this is pressed the maze immediately surrounding the diamond is demolished. However, using this feature increases your number of moves by four.

This function can only be used three times so that a level of skill is required from the player. When you reach the ball you are informed of your score and the lowest number of moves it has been

completed in so far.

The program incorporates good colour and sound.

### Program notes

- 10-100 Set screen, draw maze
  - 175-300 Move player, play note
  - 551-570 Plays musical notes if you hit a wall
  - 600-640 Congratulates you when you have traversed the maze
  - 1000-1046 Destroys maze
  - 1049-2000 Plays music.
- All cursor controls are in lower case

## Harrier Pilot

### on Spectrum

The cockpit of the aircraft is filled with rows of flashing lights, silently signalling their vital messages to you, but your steel blue eyes are darting from your Artificial Horizon/Allimeter to your Radarscope as you fight for control of your £7m craft. Your fuel gauge indicates that you have only 60 seconds fuel remaining and the cross that indicates the ship's position, only 85ft below you, won't keep steady.

Only 20ft altitude now, and your breath quickens as your Artificial Horizon/Allimeter shows you to be steady, level and slowly dropping. Suddenly your eyes widen in disbelief; your Radarscope shows that a gust of wind has blown you to one side, can you bring your Harrier back above the small ship before you crash into the sea...?

### Program notes

40 Zero best score  
50-190 Draw screen display  
110 Set variables  
120-170 Read keyboard

180 Erase previous screen image  
190-200 Wind random factor  
210-250 Set new values for new screen display  
260 Fuel gauge  
270-320 Check for end game  
330 Print new screen image  
340-370 Set new in/crude factors  
380-410 Screen image subroutine  
420-510 Different endings to game.

### Variables

fu - fuel  
rd - rate of side drift  
m - a (Radarscope)  
n - y (Radarscope)  
ra - rate of ascent  
p - degree of tilt (0-level)

```

## HIRE ZX81/SPECTRUM PROGRAM TAPES

Make the most of your Sinclair ZX81 or Spectrum computer hiring tapes from the original software library — NOW OUR SECOND YEAR with over 2,000 satisfied members!

- Over 950 tapes stocked, offering more than 130 different programs from 40 suppliers (all with their permission) — many of the best currently advertised, plus some specially commissioned — and the range is constantly updated!
- Adventure, arcade and simulation games, many business and other practical programs, utilities, graphics education and much more besides
- Descriptive list makes choice easy
- FREE quarterly, illustrated magazine includes tips from a professional programmer, DIY plans, reviews, letters, discount offers — plus our Top 40 Tapes chart averaged from thousands of members' scores
- Full-time staff offer you a really friendly, efficient welcome & service
- A fortnight's hire from just £1.20 (including VAT and first class p/p — hire just what and when you like)
- NEW! Overseas branches now operating: Benelux: Jacobsmitlaan 75, B-2400 MOL, Belgium (mem. fee £4.5, Guilders/790 & 690 Bfr); Eire: Sofienk, 120 South Circular Rd., Dublin 8 (£12.50 post!); South Africa: P.O. Box 1769, Manzini, Swaziland.
- All tapes guaranteed loadable
- You may switch from ZX81 to Spectrum at any time if you upgrade
- Don't make do with second best! Join the original and biggest library.

YOUR FIRST TAPE FREE if you use this month's coupon!

**SOL SOFTWARE LIBRARY** DEPT (PCWK)

## Tony Bridge's Adventure Corner

### Dungeon Master

This week, a Spectrum review (yes, another, I'm afraid, but I have reflect in this column the popular feeling, which at the moment is toward Adventure programs for the good old Sinclair machine — outselling others by a factor of, I'd guess, 10!).

Many of the letters we receive are from D & Ders. This section of the Adventuring community are those souls who once used to sit around a large piece of graph paper, with other like-minded people, indulging in Role-Playing Games (RPGs for short). The best-known of these was, and is, Dungeons and Dragons, hence D & D.

Created by the venerable Gary Gygax and Dave Arneson in the 1970s, this game is played, typically, by several people, who attempt to solve the mysteries of a complex of Dungeons (originally, but as often as not, nowadays, a network of streets in post-nuclear New York, or a spaceship in the staggeringly distant future, or...). This complex is the brainchild of the Dungeon Master, who maps out the playing-area before the players arrive, and populates the complex with Monsters, Treasures, Traps, and so on. He takes no part in the exploring of the caves, except as a divine presence, giving the players guarded information as to what they can currently see, or how they are faring in battle. A large amount of information, rules, and scenarios has been built up over the years, until now a whole world of details may be experienced when playing RPGs.

It seems a fairly obvious area of exploration, as far as computer games are concerned — the computer, after all, would be the most unbiased referee, and the least likely to forget anything in the heat of the battle. Merely program the details.

This series of articles is designed for novice and experienced Adventurers alike. Each week Tony Bridge will be looking at different Adventures and advising you on some of the problems and pitfalls you can expect to encounter. So, if you have an Adventure you want reviewed, or if you are stuck in an Adventure and cannot progress any further, write to: Tony Bridge, Adventure Corner, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

your latest creation into the computer, and then lean back and let it take over as mediator.

Software companies seem to have been very slow in taking up the challenge, however, and the only real D & D program that I have seen is *Dungeon Master*, from Crystal Computing. Several other programs, from other companies, take certain aspects of the D & D rules, and incorporate them into programs, but *Dungeon Master* is a system which the budding Dungeon Master can use to create his or her own Dungeon.

The first program on the tape is the eponymous *Dungeon Master*. Once Loaded, the program will ask the player if a previously created character is to be introduced to the system. If not, the *Dungeon Master* will create one for you. The attributes, in true D & D fashion, are constructed from parameters such as Strength, Intelligence, Agility and Charisma (there are a couple of others). Then the player ventures into the Dungeon set up by the program. In the Dungeon, the usual Adventure commands, such as *Look*, *Keep*, *Drop*, and so on are recognised, and the Adventure continues as usual.

The Dungeon on this side of the tape is merely an example, however. The second side of Crystal's tape contains a program called *Dungeon Creator*, which is as good as its word, in allowing the user to create a Dungeon of their own.

This program is really powerful, and a great boon to anyone vaguely interested in D & D. *Dungeon Creator* provides all the facilities you need to enter and modify, or edit, your customised Dungeon for use with *Dungeon Master*. The menu contains: *Create*, *Inspect*, *Extend*, *Modify*, *Append*, *Load*, *Save* and *Quit*.

These are all fairly obvious — *Create* assumes that the user has, first of all, planned the Dungeon on paper. The program asks how many rooms, or locations the user requires, and then goes on to set up the exits and then contents of the rooms, at the user's instigation. A list of Monsters, degree of nastiness is presented, and the user may stipulate which Monster he wishes to appear in each room. The same procedure is adopted with weapons and potions.

Apart from the Monsters and Potions, Spells may also be put into each room, and these range from the Astral Escape Spell, through the Rod of Annihilation to the Curse Scroll, each of which have a different degree of difficulty.

Having thus created the Dungeon, the user may then *Inspect* each room, and modify or edit as necessary. Another option is to *Append*, or add, yet more rooms, or a 3D matrix if required. Finally, the created Dungeon may be *Saved* to tape, and then *Loaded* into the *Dungeon Master* and explored.

The system, from Crystal Computing, will prove to be a welcome friend to the D & D enthusiast who may well be making his first foray into the world of micros. *Dungeon Master Creator* is from the same stable as *The Halls of the Things*, which I enthused about a few weeks ago, and although the people behind Crystal Computing are rather deprecatory of *Dungeon Master*, I very much enjoyed using the system. It's probably a bit too complex to be anything other than an amusing way of filling a few spare moments, but the characters that can be created would be easily transportable to your own Dungeon.

Next week, I shall be looking more of your problems.

Are you stuck in an adventure? Are you faced by a problem that seems insurmountable? *Adventure Helpline* may be the answer.

*Adventure Helpline* is quite simply designed to put adventurers in touch with one another. Where you may be stumped by a baffling puzzle, a fellow adventurer may be able to help. By the same token, you may be able to help other people with their problems.

If you are having difficulties with an adventure, fill in the accompanying coupon and send it to:

*Adventure Helpline*  
Popular Computing Weekly  
12-13 Little Newport Street  
London WC2R 3LD

We shall publish *Adventure Helpline* entries each week in their own special column.

**NOW YOU CAN LIFT STATIC DRAWINGS, PHOTOGRAPHS, ETC. RIGHT OFF THE PAPER AND BRING THEM TO LIFE INTO YOUR PROGRAM!**

TWO POTENT FEATURES COMBINE TO BRING YOU UNIQUE NEW POWER OVER YOUR SPECTRUM GRAPHICS!

FROM PAPER TO SCREEN...  
...AND INTO YOUR PROGRAM.

# POWER GRAPHICS

**ACTION-TRACER** (OR USE TRACKER SYSTEM)  
**GHOST-WRITER** PROGRAM COURIER

Once GHOST WRITER has captured Space-Drawings you can immediately reproduce it anywhere, any way, AND redraw it if you!

No problem producing multi-angles and turning them upside-down in just a few seconds!

Drawing a simple three-section house with roof and double architecture in just a few minutes. A simple task for a computer. But it's not so simple for a human. Now you can do it in minutes with POWER GRAPHICS!

**MANIPULATION IN ANIMATION (GHOST WRITER ALWAYS WRITES EXACTLY THE PROGRAM YOU NEED)**  
You can tell GHOST WRITER to program selected parts of your design with their own special line numbers allowing you to call them up separately sub-routines. Thus you can add or remove parts at will - like the human hand in the chemistry diagram.

**INSTANT FORECAST?**  
How about you see an offer a program that appeals your name exactly as you do yours?  
It's just a few minutes fun with POWER GRAPHICS!

Animating the type of this anti-brain 're-usable' through the '1' as just as simple and thanks to POWER GRAPHICS! using its previous high-speed curves when repeated correct it does not look as overbright. But, cut your eye can be overwhelmed in real time.  
POWER GRAPHICS is fun to use, simple in operation and the beginning and advanced users alike to get important new programming tool that allows the Spectrum a potential for upgrading its graphics into exciting new regions.  
**IF YOU WANT PICTURES YOU CAN USE IT, HAS TO BE POWER-GRAPHICS**

**ZX SPECTRUM FOR 16K OR 48K ONLY £8.95**

**BUTTERCRAFT**  
14 Western Avenue, Riddlesden, Kelghley, Yorks. ENGLAND  
PLEASE ASK FOR OUR ILLUSTRATED LIST OF GUARANTEED-QUALITY TRS80 VIDEO GAME SOFTWARE

**ACTION-TRACER** Gives you the power to transfer drawings, photographs, postcards, lettering — in fact ANY paper-based images into full colour. We draw on your Spectrum screen with astonishing ease and an accuracy that rivals expensive digital tracers. But this time you get more than just a static on-screen design that has to be laboriously drawn on and left type. **DECEASE!**

**GHOST-WRITER** Interprets your on-screen design into the precise sequence of basic instructions needed to EXACTLY reproduce it, and then writes the program for you. Directly into memory! New program lines appear in your listing which are indistinguishable from ones you might have written yourself. When you're finished, POWER-GRAPHICS will self-destruct, leaving behind only your new program lines ready to use.

**TOGETHER THEY'RE DYNAMIC!**  
The new program captures your design DYNAMICALLY, giving you instantly the power to MOVE it anywhere, to SHRINK it down to a single pixel or EXPAND it to fill the screen. You can SQUEEZE or STRETCH it into weird distortions, flip it UPSIDE DOWN or MIRROR IMAGE it, ROTATE it in the plane of the screen. In other words MANIPULATE IT UNDER YOUR FULL CONTROL!

**WIN THE POOLS?**

**48k**

**SPECTADRAW 2**

A Pools Prediction Program for the 48k Spectrum microcomputer. The program looks at the recent form of the teams playing in each week's English and Scottish football league matches and then refers to a large database of what has happened in the past when teams with similar form met. It can then identify the matches which are likely to yield draws and output suitable predictions.

The program is supplied complete with a database tape containing 250 "in-form" matches, and a comprehensive instruction manual.

For £12.95 inclusive (cheques/P.O.s payable to B. S. McCreary), SPECTADRAW, 1 COWLEAZE CHINNOR, OXFORD, OX3 4TD.

**ZX81, SPECTRUM, DRAGON BBC AND VIC**

**SOFTWARE LENDING LIBRARY**

We have for hire from 50p (including postage) programs for your computer.

£5 for life membership (less than the cost of a single game) brings you the Software Lending Library membership kit including catalogue, newsletter.

All tapes lent with full manufacturer's permission.

Send a cheque or postal order for £5 to Software Lending Library, PO Box 3, Castleford, West Yorks stating name, address, and computer type.

## M & J SOFTWARE

**DRAGON R4-FORTH C12** A cassette based implementation of FORTH which includes a powerful text editor and a 6800 macro assembler. All the power of Basic retained by being able to access Basic commands from FORTH. It can be loaded by the low price of this package. It represents unbeatable value for money and comes complete with extensive documentation. We have tried to provide as much technical information as possible so our documentation is not aimed at teaching the language.

**R4-FORTH ASSEMBLY SOURCE LISTINGS C7** each. Available for the following processors: 6800, 6801, 6809, 8086, 8088, 8080, 8080, 8086, 88 and 8080 processors.

**NVP FORTH ASSEMBLY LISTINGS D2** each. Available for the 4502, 8086, 88 and 8080 processors. These listings provide the source for an implementation of FORTH up to 78 standard.

**R4-FORTH INSTALLATION MANUAL C5** A complete how-to-do-it guide to the implementation of FORTH from the above listings. This manual contains the FORTH source written in FORTH, an editor, an assembler and a compiler.

**4502 and 8082 MACROASSEMBLERS C5** each. Written in FORTH, these listings require the previous listings for assembly and compilation. Copies can be supplied for Dragon and Microtan users at £1 each.

**DRAGON COMPANION C4** The DRAGON COMPANION has been well received by thousands of Dragon users throughout Europe. Its author has an obsessive desire in computer science from New University, making further useful information — including a listing of a 6809 assembler — in this publication. A must for any serious Dragon user.  
 Cheques and POs to: M & J SOFTWARE, 34 GRAYS CLOSE, SCHOLAR GREEN, STONE-OR-TRENT, S77 3LU. Tel: 01629 517876.

## POOLS PREDICTION

### "POOLSWINNER"

# GEM SOFTWARE

for LYNX, DRAGON, SPECTRUM  
and ZX81 Software

**SULTAN'S MAZE** by Christopher Hunt. Enter the 30 Maze in search of the Sultan's jewels, but beware, your strength may run out, or, you may come face to face with the Mad Guardian. A multi-difficulty game with fantastic graphics and sound. Price (LYNX & DRAGON) £7.95

**MONSTER MINE** by W. E. MacGowan. Escape from the mine with as much money as you can, but don't get closed in or caught by the prowling monsters. An addictive machine code game, with superb graphics and save facility. Price (LYNX & DRAGON) £7.95. Price (SPECTRUM & ZX81) £4.95.

**GDUP** by Pete Allen. An excellent Basic program, giving you an 18-hole course, with handicaps and choice of clubs. A golfing weakness must be specified. Amazing graphics and sound!! Price (LYNX & DRAGON) £7.95.

**CHATEAU** by Pete Allen. A new type adventure, in which you must wander the Count's old mansion in search of treasure! Of course, when the Count hid his treasure, then died, he left lots of unpleasant surprises for those brave enough to try and seek out his riches! Come face to face with Ghouls and Ghosts, Vampires and Trolls; do you run or fight? Will the mysterious Travel Agent suddenly appear and whisk you away to far off places? Where can you find the key or the lamp? Is the clock booty-trapped? Will you die a cold and lonely death, or will you win through to claim the fantastic treasures of The Chateau? Price (DRAGON) £7.95.

**GAMES PACK III** by Christopher Hunt.

**REVERSI**. Pit your wits against the Lynx with this easy to learn, yet extremely demanding board game. Five skill levels, from novice to grand master.

**SNAKE**. Guide the snake to the food, but watch out, he will grow and must not eat the wall or himself.

**PONTOON**. An excellent implementation of a favourite card game in full colour with sound. Lynx is a mean Banker. Price (LYNX) £7.95.

**QEMPACK IV** by W. E. MacGowan. Two great machine code games, with full colour graphics. In **See Harrier** you must land your plane on the aircraft carrier, after dispersing the clouds with chemical bombs, but don't hit the ship! In **Sub Cheese** you must depth charge the wolf pack without being sunk. Both with four levels of play from easy to kamikaze! Price (LYNX & DRAGON) £7.95.

## NEW RELEASES

### HALF THE SIZE

Apart from finding different subjects for books, publishing houses seem also to be producing different sizes of book to distinguish theirs from all the others and keep prices down.

As part of its Q+A series Newnes technical books has issued *Basic Programming* by Peter Lafferty.

Without criticising the actual content the book has two things to distinguish it, the fact that it is about half the usual size of a book, and its format.

The latter is interesting — a general introduction to Basic is given in the form of Questions and Answers. Eg, What is a loop? What are User defined characters? This should make it easier for people to get a specific point answered without searching through a mass of text.

**Book** *Basic Programming*  
**Price** £2.50  
**Micro** *General*  
**Publisher** *Newnes Technical Books*  
*Borough Green*  
*Sevenoaks*  
*Kent TN15 8PH*

### MACHINE CODE

## Z80 MACHINE CODE FOR HUMANS

If you look at *Popular Computing Weekly's* book charts (and I'm sure you do) you will have noticed that it's actually the more technical computer books that are selling well — everyone, it seems, wants to learn machine code.

The problem is, of course, that machine code is not easy and, particularly to begin with,

most people find the going pretty tough.

With *Z80 Machine Code for Humans* Granada is trying to simplify the task without being machine specific. The book is designed for the novice — it gradually builds up machine code skills by using short routines.

**Book** *Z80 Machine Code for Humans*  
**Price** £7.95  
**Micro** *General (Z80 processor)*  
**Publisher** *Granada Publishing*  
*PO Box 9*  
*Frogmore*  
*St Albans*  
*Herts AL2 2NF*

### INSOMNIAC

Ian Sinclair's output is astonishing, every week we seem to get another book — does the man ever sleep?

The latest addition is *Inside Your Computer* which is designed to introduce novices to the bits and pieces 'under the bonnet' of their machine.

Chapters discuss The Basic Interpreter, Inputs and Outputs, the Microprocessor.

One useful section illustrates the correct way to add additional chips to your computer (a 48K upgrade on your Spectrum, for example) which can be surprisingly difficult, and infuriating if you get it wrong.

**Book** *Inside Your Computer*  
**Price** £4.95  
**Micro** *General*  
**Publisher** *Granada Publishing*  
*PO Box 9*  
*Frogmore*  
*St Albans*  
*Herts AL2 2NF*

### NOVICE

The Epson HX-20 tends to be forgotten amongst all the Spectrums, Dragons and BBCs of this world, but it has sold well.

*Getting Started with the Epson HX20* is actually one of only a few books on the machine.

As the title suggests it is intended for the absolute novice. The various terms of Basic are introduced and illustrated — in view of the fact that the Epson was first sold as a portable business machine, it is perhaps not surprising that

the examples and programs are geared towards serious uses rather than games.

**Book** *Getting Started with the Epson HX20*  
**Price** £5.95  
**Micro** *Epson HX20*  
**Publisher** *Phoenix Publishing*  
*14 Vernon Road*  
*Bushey*  
*Herts WD22 2JL*

### ADVENTURES

The first of what is likely to be a veritable surge of books on Adventure games has been issued by ... well, by us actually.

Tony Bridge, grand inquisitor and elf most high of our adventure department, has written a book called *Spectrum Adventures*.

The first section of the book examines the history of adventures and discusses the themes common to all of them. Subsequent sections take you through the development of your own graphic adventure, constructing mazes, creating monsters, and so on.

I should add that the 48K program contained within the book was programmed by Roy Carnell.

**Book** *Spectrum Adventures*  
**Price** £5.95  
**Micro** *Spectrum (Adventure needs 48K)*  
**Publisher** *Sunshine Books*  
*12-13 Little Newport Street*  
*London WC2R 3LD*

### EXPENSIVE

Whatever else American-produced computer books are, they are expensive — £15.95 for 214 pages and only black and white diagrams is quite a price.

Pascal programs for games and graphics consists of 22 programs designed for the Apple with UCSD Pascal.

The author Tom Swan has written a number of books specialising in Pascal and in this book his intention is to teach the language through the games — perhaps if you have a 64K Apple and twin disk drives (which is more or less the minimum requirement) you may not find nearly £16 for a book so hard to bear.

**Book** *Pascal Programs for Games and Graphics*  
**Price** £15.95  
**Micro** *Apple 64K + Disc + Pascal*  
**Publisher** *John Wiley & Sons*  
*Shipney*  
*Bognor Regis*  
*West Sussex PO22 9SA*

### INTRODUCTION

*The Personal Computer Handbook* is designed both to be a general introduction to the subject of what a computer is and also a practical buyers' guide to what's on the market and how they compare.

If that weren't a large enough subject, it ends with some programs and various lists of computer clubs and other books.

Obviously, it's not possible to go into very much depth — the machine reviews are two pages each — and there are some surprising omissions and more inevitably errors of fact.

Perhaps the disparate elements look a bit cobbled together, but it's cheap and potential buyers may find it useful.

**Book** *The Personal Computer Handbook*  
**Price** £3.95  
**Micro** *General*  
**Publisher** *Virgin Books*  
*61/62 Portobello Road*  
*London W11 3DD*

# NEW RELEASES

## MONSTERS

Believe it or not there was no version of Puckman for the Oric — until now.

*Oricmunch* appears to offer all the features of the original arcade game, including the prizes for good scores like cherries and lemonade.

Although usually you have a fighting chance against the monsters, should you eat two of them they double in speed. The game is the first of an intended series of arcade games to be released by Tansoft over the next few months.

Program *Oricmunch*  
Price £7.95

Micro *Oric 16/48K*  
Supplier *Tansoft*  
*3 Club Mews*  
*Ely*  
*Cambs CB7 4NW*

## SADISTIC

Brilliant software is a company specialising in adventure games. *Way Out West* is for the Dragon 32.

Your task is to make your fortune in a gold mine, armed only with your trusty 32 and an enigmatic clue "Having a sadistic nature helps".

The game is said to be highly complex and so a Save instruction is included.

Program *Way Out West*  
Price £6.95  
Micro *Dragon 32*  
Supplier *Brilliant Software*  
*10 Newlands Drive*  
*Gedling*  
*Nottingham NG4 3HU*

## KEYWORDS

A whole range of additional Keywords to Spectrum Basic are made available by *Beta Basic* from Betasoft.

The program includes 26 new Keywords and 10 new Functions. The Keywords include *Alter*, for extensive manipulation of the attributes

file, *Dpoke* for a double *Poke*, *Rnum* to renumber the program, etc.

The Functions allow for decimal/hex conversion and number formatting.

All Keywords are simple entry, with full syntax check on entry. The program, which also provides for a Trace facility, comes complete with an extensive manual.

Program *Beta Basic*  
Price £11.00  
Micro *Spectrum 48K*  
Supplier *Betasoft*  
*92 Oxford Road*  
*Moseley*  
*Birmingham B13 9SQ*

## VICIOUS

The first part of a "multi-player fantasy adventure game" is called *Usurper* and is for the 48K Spectrum.

The game is for up to 10 players who compete (viciously) against one another until one becomes strong enough to tackle the King.

As each player spins out their Machiavellian plots, instructing the computer where to move, who to kill, fate may intercede in the dread form of Vampires, ghouls and other beasts.

Program *Usurper*  
Price £6.00  
Micro *Spectrum 48K*  
Supplier *Assassin Software*  
*10 Ash Road*  
*Leeds LS6 3JF*

## LILY LIVERED

If the gory cover and the warning "Parental guidance recommended for children under 16 years" are anything to go by, *Hells Temple* (excuse the pun) is one hell of a program.

The game claims to have over 70 monsters, the setting is *Hells Temple* where "only courage, sorcery and a strong sword arm rules" (can you imagine an adventure game where lily liveredness, running away and quaking with fear hold sway?).

Within *Hells Temple* are various riches as well as the aforesaid monsters — at each stage your computer gives you a 3D view of the Temples catacombs. The producers of the game have incorporated a nice idea — they have set up a club for *Hells Temple* enthu-

siasts to correspond together, swap notes, etc.

Program *Hells Temple*  
Price £12  
Micro *Oric 1 48K*  
Supplier *Kenema Associates*  
*1 Marlborough Drive*  
*Worle*  
*Avon SB22 0DO*

## GNASHERS

Richard Shepard Software has produced games which have consistently been in the top ten Spectrum charts.

The latest program is described as a "3D graphic adventure" and is entitled *Devils of the Deep*. You must explore the lost city of Atlantis, locate its treasure and bring it back to your boat.

The game boasts 100 screens, each depicting a different section of sea bed. The monsters of the title are giant electric eels whose one weak spot is their gnashing jaws.

Around the ocean bed are various objects including a harpoon gun, harpoons, spade and a knife. Sophisticated game players may have to face giant crabs.

Program *Devils of the Deep*  
Price £6.50  
Micro *Spectrum 48K*  
Supplier *Richard Shepard*  
*Elm House*  
*23-25 Elmshott Lane*  
*Cippenham*  
*Slough*  
*Berks*

New Releases is designed to let people know what software is coming on to the market. If you have a new game or utility which you are about to release send a copy and accompanying details to: New Releases, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

## Study studies

My comments a few issues ago, about the "child", and 'A' levels, prompted one particularly interesting response.

The reader, about to choose his 'A' levels, commented: "Your saying that Computer Science 'A' level has no real use has only made me more confused about a confusing subject — the types of jobs in computing and the qualifications required for each."

My correspondent asked if I would discuss what jobs, opportunities and qualifications exist in computing, as he would like to work with computers. He is starting 'A' levels this September.

Incidentally, the academic renegade saw my piece, recognised himself, and still disagreed.

Many of the jobs I might have wanted as a youth no longer exist. When I was "deciding" (or having decided for me) my 'O' level subjects, there were no more than 200 computers in Britain, and I had not heard of any of them.

Within two years, in personal computing, we have seen the rise of the software house whose output is basically games. We have recently seen the promise (if "promise" is the correct word) of cable software, and software over the telephone. The opportunities are changing all the time.

My 'O' levels fitted me perfectly for the computer age, even though the "computer age" was not to come for several years. The reason they fitted so well was the range of subjects I had to take.

We all had to take Mathematics, one foreign language, English Language, and English Literature. Those four subjects should be the basis of any selection of 'O' level subjects. I then took two science subjects, and two arts subjects.

These 'O' levels enabled me to pick and choose from any subject at 'A' level, not based on some silly idea that I was either a "science" or an "arts" person, because of my 'O' levels. It also meant that I was not already funnelled into some career at an incredibly early age.

Given the syllabus of most of the Computer Science 'O' level courses I have examined, the value of the subject as a preparation for 'A' levels in general seems almost nil. The academic content of Computer Science 'O' levels appears far too low.

What is usefully learnt with 'O' level Computer Science that cannot be learnt from playing with computers, and reading magazines?

A very similar attitude should influence your choice of 'A' levels. At 'A' level you have a chance to study fewer subjects in greater detail. How you study, and what you study, are influenced by how you see education.

If you see education merely as a means to an end, the end being a job, then I think that is being short-sighted. The Government's "training" initiatives are of this nature, youngsters — who do not know better — foregoing education to be trained in "vocations" which might not last beyond a few years.

Education should be about helping people to learn to be adaptable, to learn to think, and learning a basis of knowledge which will help, whatever the future might bring.

Essentially, choose the subjects at 'A' level which interest you, as long as the subject has a strong academic (usually non-vocational) content. If you are interested in languages, take languages at 'A' level; if you are interested in the humanities, take humanities 'A' levels; or, if, as I was, you are interested in maths and the sciences, take those 'A' levels.

Computer Science 'A' level is basically a non-academic, vocational subject, and is not a preparation for computing. Indeed, it is not accepted on many computer science degrees.

There again, computer science degrees are no easy way into computing either.

If you are interested in computing, then compute. Write programs, and try to sell them; try to extend your knowledge by reading widely; and try to see if you can use a computer to do new things, other than zap.

In computing, and related areas, you are judged by what you know and what you can do — not by your qualifications.

Boris Allen

# Puzzle

## Eight divided by four

### Puzzle No 74

"What's eight divided by four?"

This unexpected question from my daughter came as a bit of a surprise. "Two of course!" I replied and then instantly realised this was no ordinary question. "No!" she exclaimed "eight divided by four is three."

And so it was, as she was able to demonstrate. By writing down the division sum in words it was possible by substituting digits for the letters to make the sum correct.

$$\frac{\text{EIGHT}}{\text{FOUR}} = 3$$

Each of the letters represents a different digit, but no zero is used. Also 'eight' and 'four' are (of course) both even numbers.

### Solution to Puzzle No 69

There is one slight catch in the problem. By convention, 0! is equal to 1, not zero as might be supposed.

Consequently, line 210 of the program treats any zero as though it were a 1 (thus having a factorial value of 1).

One program which gives the right answer is:  
**10** LET N = 1 20 LET NS = STR\$ 30 LET T = 0 40  
 FOR A = 1 TO LEN NS 50 LET M = VAL (NS(A)) 60  
 GOSUB 200 70 IF T=N THEN GOTO 100 80 NEXT A  
**90** IF T = N THEN PRINT "100 LET N = 1 + 110  
 GOTO 20 200 LET Q = 1 210 IF M = 0 THEN LET M =  
 1 220 FOR P = 1 TO M 230 LET C = Q \* P 240  
 NEXT P 250 LET T = T + Q 260 RETURN

This program produces the only other number, apart from 1, 2, and 145, which is the sum of the factorials of its digits. This number is: 40,585.

### Winner of Puzzle No 69

The winner is: Francisco Santos, Rua Bartolomeu Dias, 2900 Setubal, Portugal, who receives £10.
